

Actual volumes of formula required are a function of a child's weight, age, and other variables and should be determined by a Registered Dietitian or the child's primary care provider. Nutritional requirements for children are not solely based upon age and nutrient goals must be calculated accordingly.

Special Notes:
*mL range is given due to the volume being effected by viscosity, altitude and temperature. For the most accurate measurements please use the grams listed. All nutritional information contained herein is calculated using a 341/per pouch gram weight measurement.

**The DRI percentages are based off the Institute of Medicine's Dietary Reference Intakes for children ages 4-8 years of age.

Nourish Peptide undergoes regular nutritional analysis and lab testing. However, as with any real food product, variations in the nutrient levels can vary depending on the time of year, soil, and weather conditions. Although we do our best to provide you with the most accurate nutritional information possible, if you have a medical condition that requires you to be precise with specific nutrient levels, please discuss the use of this product with your medical team.

USER GUIDE :

- Please check with your medical team for an appropriate transition regimen if switching from a commercial enteral formula to Nourish Peptide. You may need to transition slowly over the course of 7-10 days to allow the body time to adapt to differences in the formulas.
- Nourish Peptide has a 12 hour ambient room temperature hang time.
- Store unopened formula at room temperature for up to 2 years.
- Once opened, the formula can be refrigerated in a sealed container and used within 48 hours.
- Water may be added. If adding water or any liquid, it must be reblended with the product to emulsify in order to prevent separation.
- The formula can be eaten orally. Many enjoy it when heated on the stove and eaten as a soup, or when mixed with fruit and ice to create a smoothie.
